

Price printing of nameplates (stickers):

Area, cm ²	Price, UAH
1000	0,58
2000	0,55
3000	0,47
5000	0,36
10000	0,35
15000	0,33

How to calculate the price: Let's say you need 2 * 3 cm nameplates, with a volume of 280 pieces.

1) You count the quadrature of the nameplate, multiplying the sides: $2 * 3 = 6$ cm. (One nameplate)

2) You multiply by the desired circulation: $6 * 280 = 1680$ cm (entire volume).

3) Multiply your quadrature by the price of the corresponding area: $1680 * 0.58 = 974$ UAH per volume

The term of production is 3-7 days.

The price of metal and plastic nameplates is considered separately. To do this, tell the manager metal or acrylic, the nameplate size, shape (rectangular, round, arbitrary), and what they need to be printed on (this can be engraving, screen printing, UV printing or a sticker). And we will make you a calculation of the cost of the nameplates.
